Johnson Screens® a century of innovation, experience and know-how behind the Brand.

R&D

We are committed to research and development delivering technical solutions on product and process improvements to optimise your business.

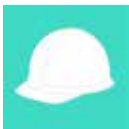

Design

In-house engineers will customise separation and filtration solutions, to offer higher performing products to solve your processing needs. The best combination of material for duty will always be selected, including wire, polyurethane, rubber, and/or plate.

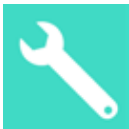

Manufacture

Since 1904 Johnson Screens® has been the world's leading brand in separation and filtration systems. With state of the art manufacturing facilities, our technology in manufacturing Vee-Wire® is unmatched. We have full control of all critical manufacturing steps from start to finish ensuring the highest quality product every time, including slot accuracy and weld integrity.

Install

Equipped with Johnson Screens® extensive training and development, our Service Technicians are fully qualified to provide on-site technical assistance during installation of our products.

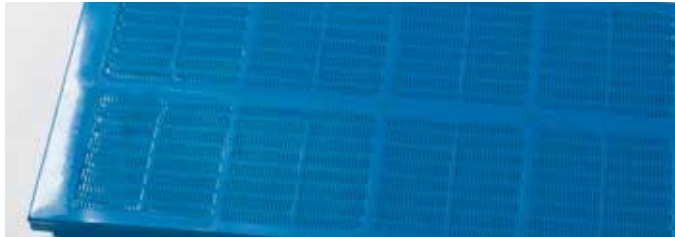

Maintenance

Servicing is essential to gather sustainable data. Our service team will deliver benchmark maintenance strategies, services and reporting, performance diagnostics and realistic recommendations for improvements, refining value and efficiency.

Products and Service

The Resi-Flex™ range of products are proven in reducing screen media cost-per-ton in coal and hard rock processing applications. Our patent designs allow different size panels, multiple fixing systems, to increase open area while maintaining particle size control, all leading to improved efficiencies.

Resi-Flex™ Polyurethane Systems

Durable and effective, featuring ease of installation and replacement. Also available in rubber.

Resi-Flex™ Vee-Wire® Systems

Increasing open area, while maintaining structural integrity and extending component life.

Resi-Flex™ Perforated Systems

Available in customised aperture shapes and in a variety of material grades to suit coarse material applications. Features polyurethane fixing systems.

Johnson Screens® Sieve Bends

With our leading Vee-Wire® manufacturing technology, we can offer greater cut-point performance.

Johnson Screens® Centrifuge Baskets

We have baskets to suit most centrifugal applications, offering a variety of wire shapes, slot directions and configurations, designed to meet your process targets.

Johnson Screens® Woven Wire Screens

Stainless Steel and High Tensile Woven Wire screens completes our range, with typical aperture / weave combinations including square, long slot, double chute and triple chute, harp (Agarvibe) and piano wire screens.

Johnson Screens® Servicing

Johnson Screens® will provide on-site technical assistance during installation, maintenance or repairs at your mineral processing plant. Our service does not stop at the warehouse.
